# Blockchain Assisted Secure Routing

## Security Routing of Swarm UAS Networking

We consider each UAS,  $u_n = \{un\}$ , as a block container in Blockchain which obtains its whole detailed identification,  $I_n$ , for verification and block digests,  $H_N$ , of the whole Blockchain for authentication.

The next hops,  $U_{(n, hops)}$ , for  $u_n$  is :

$$U_{(n, hops)} = \{u_n \mid \theta(\overrightarrow{V_{(s, d)}}, \overrightarrow{V_{(n, n+1)}}) \leq \pi\} \quad (1)$$

$$Ph_n \leftarrow (1 - \alpha) \times Ph_n + \sum_{k=1}^m \Delta Ph_n \quad (2)$$

$\Delta Ph_n$  is:

$$\Delta Ph_n = \frac{1}{l_n} \quad (3)$$

The  $U_n$  with  $\max(Ph_n)$  has the privilege to write a new block which is the identification digest of  $U(m+1)$ .

# Passive synchronization

For the synchronization of Blockchain, we adopt a passive approach to broadcast the updated blocks with the communication of the swarm UAS networking.

- 1 The updated blocks,  $H'_n$  is stored in  $u_{judge}$  which has main traffic streams.
- 2 Each packet  $p_\mu$  passes through  $u_{judge}$  will be attached to the updated blocks to synchronize the its neighbors  $U_{neighbors}$ .
- 3 The updated  $u_{neighbors}$  will be marked in  $U_{updated}$ .
- 4 The updated UAS will check its neighbors  $U'_{neighbors}$  and deliver the updated  $H'_n$  when  $p_\mu$  passes through.

## 2 Proposed Scheme

- Blockchain Assisted Secure Routing
- Blockchain based Authentication
- Blockchain Synchronization

## 3 Performance Evaluation

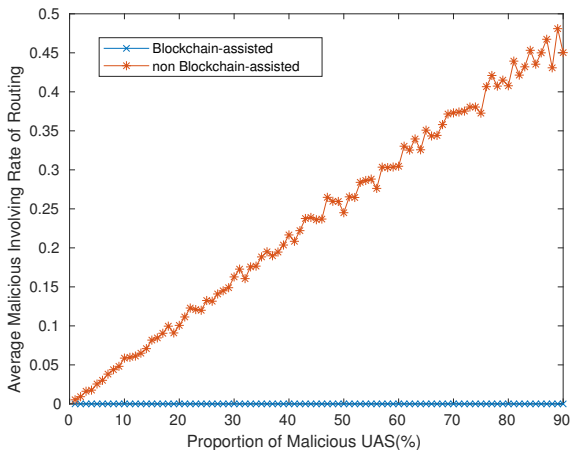

## 4 Conclusions

# Conclusions

- We leverage lightweight Blockchain to assist the swarm UASs to improve the security of routing with constraint computation resources.
- With lightweight Blockchain, swarm UASs can prevent the malicious UAS connection to the swarm UAS networking and mitigate the attacks from malicious UASs.
- Different from PoW and PoS, we leverage pheromone to mark the traffic status of each UAS in swarm UAS networking. To save routing construction, PoT synchronizes the updated blocks with the passive broadcast.

Thank you! & Questions?
